BLUEPRINT

Project: Lehrburger Residence

Location: Clearwater, FL

VRV III-S

Challenge:

Outdated equipment with parts no longer available for the units requiring replacement.

The Solution: *A Daikin VRV III-S system that will allow the new floor mount and wall mount models to fit into the same space as the previous models.*

Kron & West, Inc. Air Conditioning, servicing the Central West Coast of Florida, replaced a 30 year old Daikin system with new energy efficient Daikin floor mount and wall mount models that can both heat and cool in the Lehrburger home. The homeowners commented that they have lived in the home for 18 years and the units served them very well; they were therefore very receptive to the new Daikin line up that could fit perfectly where old units were installed. It allowed for convenient installation through the space, mounting the new units in place of the old ones, minimizing disruption and cost for the owners. The Lehrburgers are looking forward to using the new updated Daikin equipment and excited about the new control and zoning abilities that a VRV III-S can offer.
